

Building the GPA Manager

Our Project Journey from Code to Reality

Rayan Aboushark & Abdullah Oyon alsoud

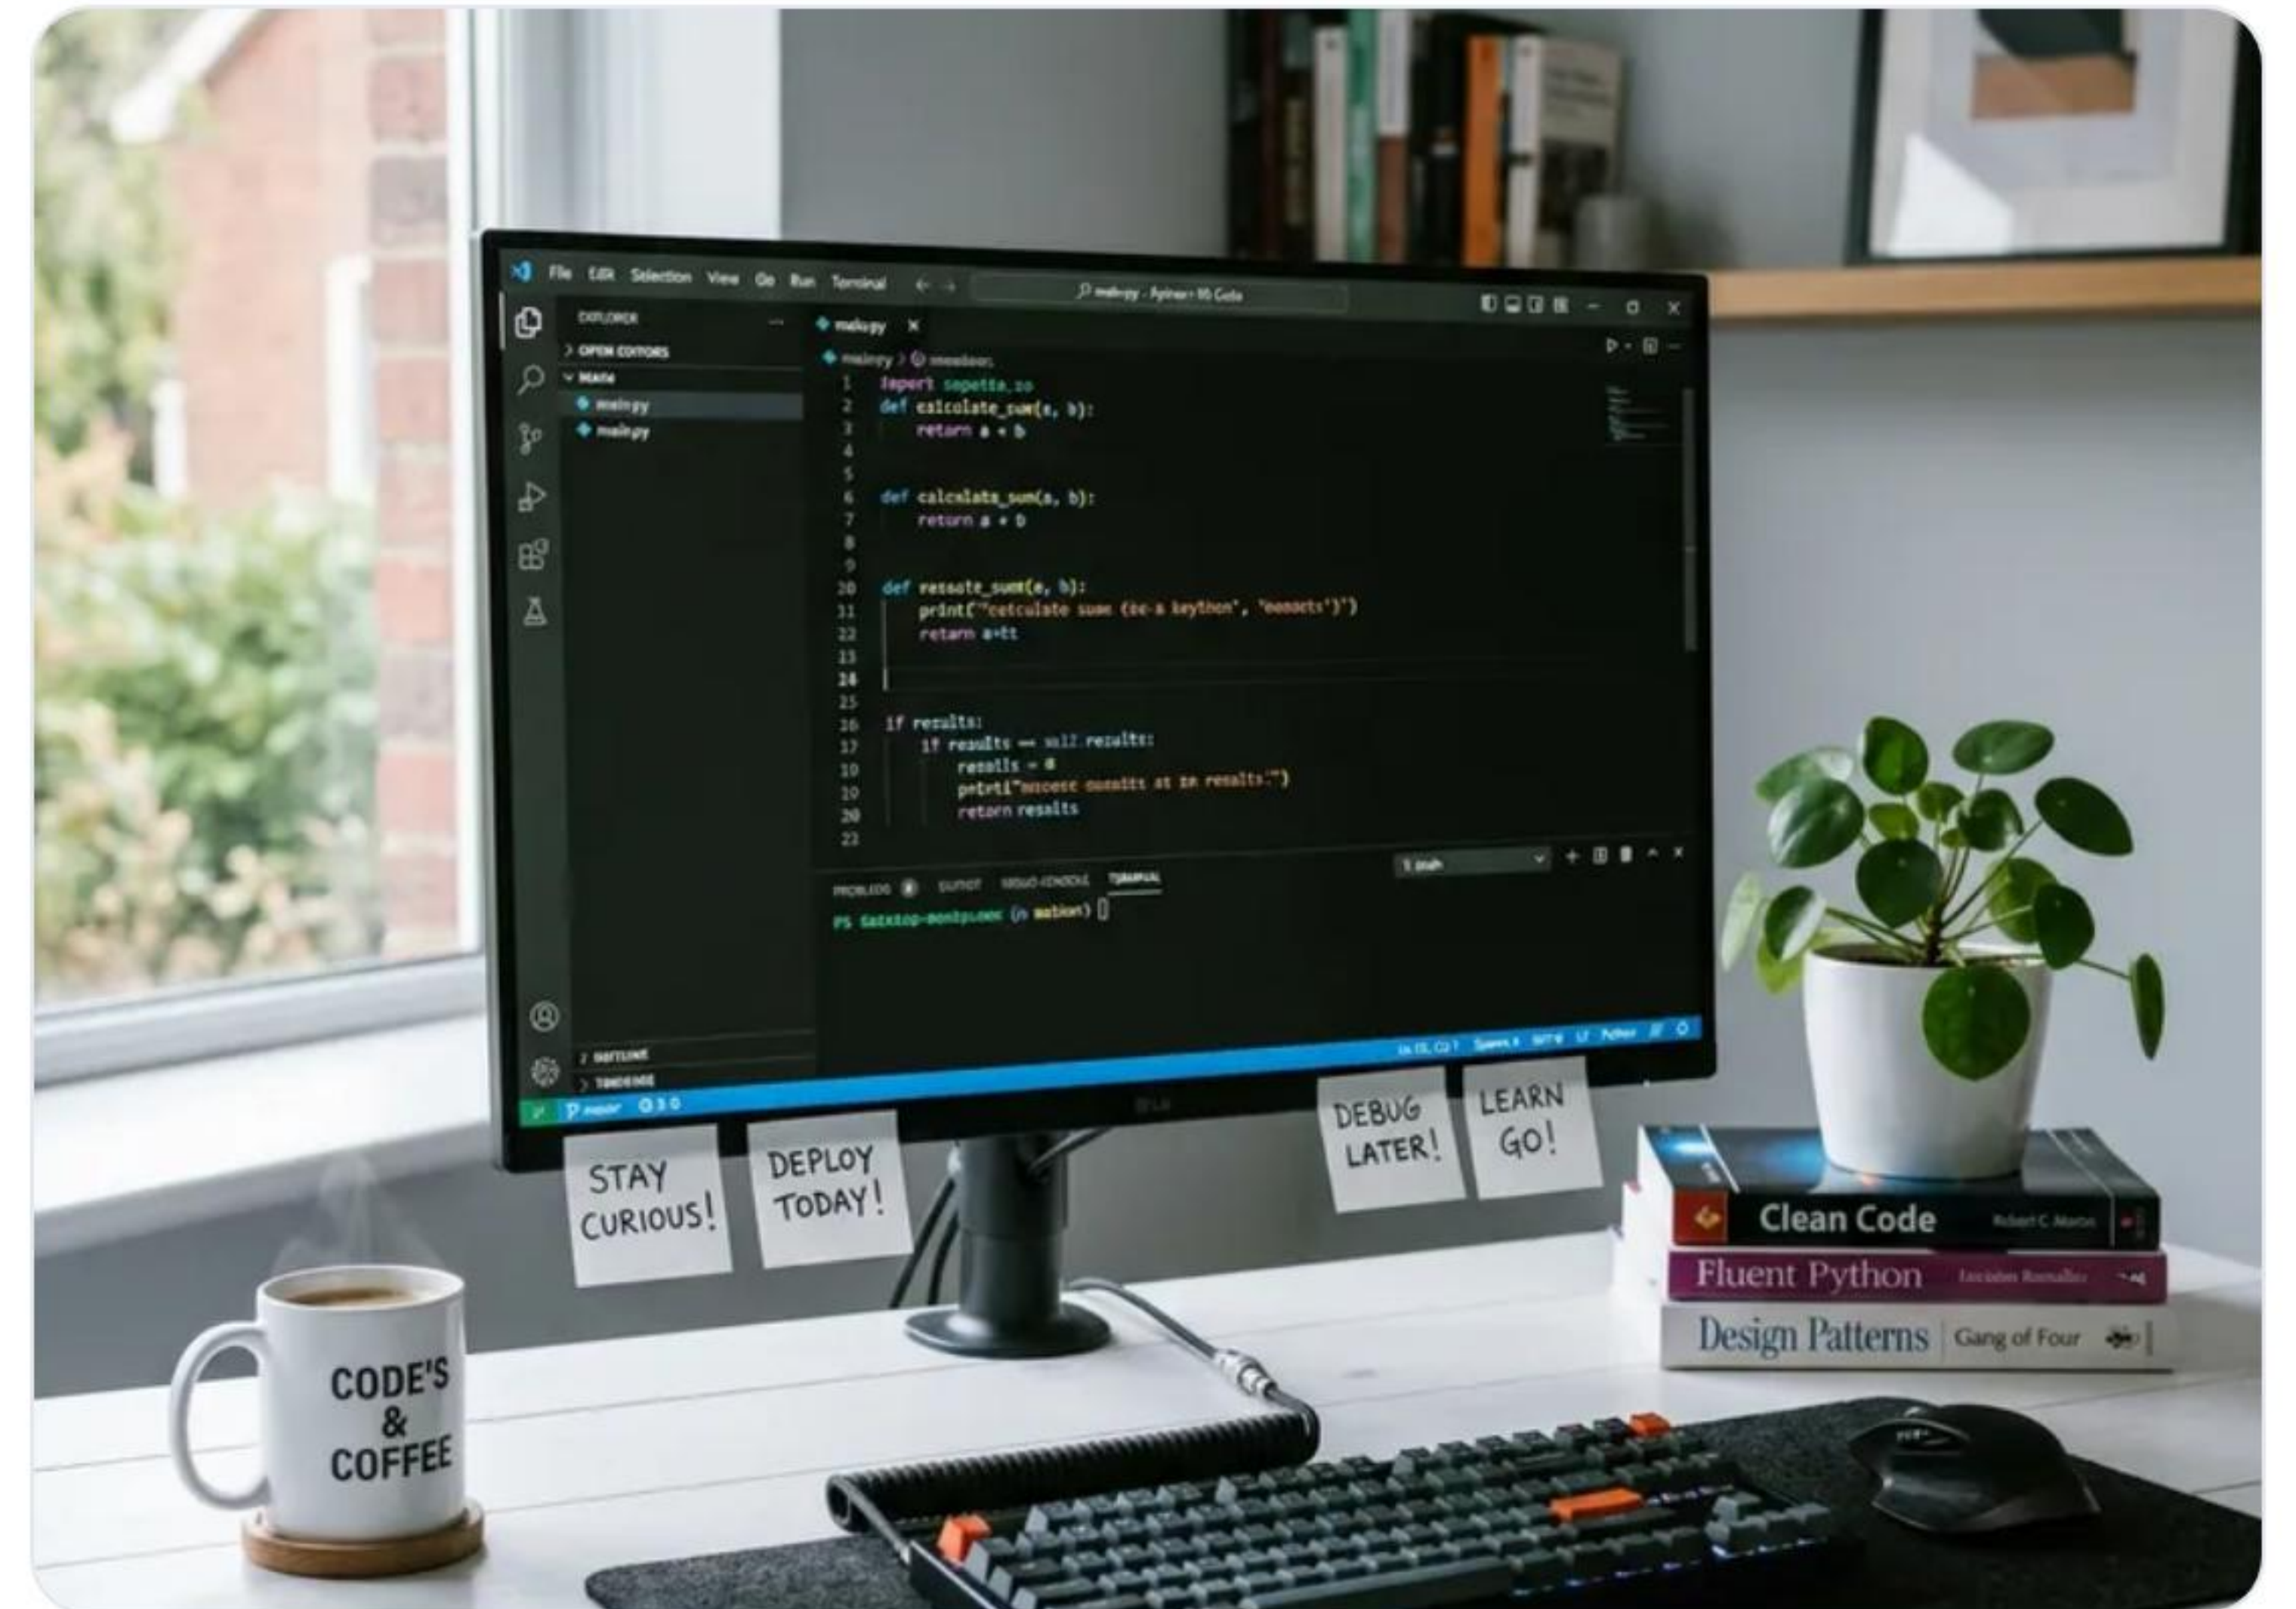

CIS 201 Fundamentals of Web Design

What we built?

A Student-Centric Tool

We aimed to create an interactive web environment that allows students to simulate their GPA results with high visual accuracy.

Goal: Ease of use + Professional Design.

The Tools Behind the Project

HTML5

The skeleton. We used semantic tags to ensure all 6 pages are structured correctly.

CSS3

The skin. Applied the official University color scheme for a professional look.

JavaScript

The brain. Powered the GPA counter with mathematical logic and DOM updates.

Visual Identity (CSS)

Brand Consistency

We followed a strict 60-30-10 rule for colors:

- **#0d3141**: Authority & Headers
- **#017f8d**: Interaction & Buttons
- **#ffffff**: Clarity & Backgrounds

- Arial (Primary)
- Monospace (Numbers)

Interactive Engine (JS)

```
// Logic Snippet
btnIncrease.onclick = function() {
  if (gpa < 4.00) {
    gpa += 0.25;
    updateUI();
  }
}
```

Dynamic Feedback

The code doesn't just change the number; it changes the **State**. When the GPA hits 3.50, the color shifts to Teal, signaling Excellence!

Dividing the Effort

Team Synergy

Rayan Aboushark: Led the JavaScript development and logic implementation.

Abdullah Oyon alsoud: Handled the UI/UX design, CSS styling, and documentation structure.

 Teamwork

Ready for Presentation

GPA Manager 2026 is fully functional and W3C compliant.
